

About Product

- The PFN Assembly is an orthopaedic implant system designed for the fixation and stabilization of proximal femur fractures, including intertrochanteric and subtrochanteric fractures. The assembly consists of a proximal femoral nail with compatible bolts and screws to provide strong and stable internal fixation. It is widely used in trauma surgeries to restore proper alignment, support early mobilization, and promote effective bone healing. Manufactured from high-quality medical-grade materials, the system offers excellent strength, durability, and reliable surgical performance.
