

About Product

- The Spine Assemblies are advanced orthopaedic implant systems designed for the stabilization and fixation of spinal disorders, deformities, and traumatic injuries. These assemblies typically include pedicle screws, rods, connectors, and related instrumentation to provide strong and stable spinal support. They are widely used in spinal surgeries to restore alignment, maintain stability, and promote effective fusion and healing. Manufactured from high-quality medical-grade materials, the system ensures excellent strength, durability, and reliable surgical performance.
