

About Product

- The THR Assembly is a comprehensive orthopaedic implant system designed for total hip replacement procedures to restore hip joint function and mobility. The assembly typically includes femoral stems, acetabular cups, liners, and femoral heads for complete joint reconstruction. It is widely used in orthopaedic surgeries for the treatment of severe arthritis, hip joint damage, and degenerative conditions. Manufactured from high-quality medical-grade materials, the system provides excellent durability, biocompatibility, and reliable long-term performance.
